

NON-ENTANGLING FADS

Echebatar tuna fishing fleet has adopted the use of the new FAD designs described in the ISSF Guide for Non-Entangling FADs in an effort to reduce shark and/or turtle entanglement.

ISSF document presents updated recommendations on FAD designs and materials to consider using for their construction, so as to minimize unwanted by-catch and pollution of the oceans caused by deployments of FADs worldwide in today's purse seine tuna fisheries.
